

Perennial, 87% organic

QQ Flowermix no. 2 is a perennial mixture selected and composed for the purpose of ensuring flowering over a long period, i.e. throughout the summer, or through two or more seasons. The flowering plants offer a rich variety of pollen and nectar for honey bees, wild bees, bumble bees and a wide variety of insects. These bees and other insects ensure an invaluable fertilization of both useful plants and the wild flora, for the benefit of the farmer, fruit growers, garden owners, beekeepers and anyone who moves into the countryside and enjoys the great richness of species and color. Flower mixes like this are a delight for the eye, for the benefit of both our biodiversity, and flowering crops, which require insect pollination.

Delivered in 10 kg sacks, seed rate 15 kg / ha

Contents
