QQ Flowermix no. 1 is selected and composed for the purpose to ensure flowering over a long period, ie. throughout the summer, thus offering a rich variety of pollen and nectar for honey bees, wild bees, bumble bees and a wide variety of insects.

These bees and other insects ensure an invaluable fertilization of both useful plants and the wild flora, for the benefit of farmers, fruit growers, garden owners, beekeeper and anyone who moves into the area and enjoys the great species and color richness.

Flower mixtures like this are a delight to the eye, and benefit our biodiversity and flowering crops that require insect pollination.
